IN THE CLAIMS:

polyether amide resin;

The following is a complete listing of the claims in this application, reflects all changes currently being made to the claims, and replaces all earlier versions and all earlier listings of the claims:

1. (Currently Amended) A forming method for forming manufacturing an ink jet print head substrate in which an ink flow path forming member is attached to is formed by contacting a substrate for forming an ink discharge pressure generating discharging energy generating element, wherein a pit is formed in an attachment region of the substrate for attaching the liquid flow path forming member with an ink flow path forming member for forming the ink flow path, said method comprising the steps of:

providing a layer on the substrate, at least a portion of the layer being

forming a pit on the substrate by performing anisotropic etching of the layer as an etching mask; and

providing the ink flow path forming member on the substrate so that the ink flow path forming member is in contact with the pit on the substrate.

2.-4. (Canceled)

5. (Currently Amended) An ink jet print head substrate formed by the method of an ink jet print head substrate according to any one of claims 1 to 4 claim 1.

- 6. (Currently Amended) A manufacturing method for making an ink jet print head using an ink jet print head substrate formed using the method according to any one of claims 1 to 4 claim 1, wherein a discharge port of for discharging ink, a liquid path communicating with the discharge port and also including the ink discharging pressure energy generating element, a liquid flow path forming member attached with the substrate to form the liquid path are formed on the substrate.
- 7. (Previously Presented) The manufacturing method according to claim 6, wherein the pit is formed in proximity to both ends of a longitudinal direction in the ink jet print head.
- 8. (Previously Presented) An ink jet print head manufactured using the manufacturing method of an ink jet print head according to claim 6.
